

Plywood Table Folds Against Wall

Dimensions of the table may be changed to suit space available

AN UNOCCUPIED space on the kitchen wall can be put to good use by installing a modern folding breakfast table. Plywood 5/8" thick is an excellent material to use. It is assembled with screws and casein glue. The shelves could be of thinner stock, but it is somewhat simpler to use one thickness throughout. The four pairs of butt hinges are recessed. A wood latch holds the

table against wall when not in use. For decorating the shelves, pick out ornaments, as far as possible, that can be screwed or cemented in place.
