

# Chairside MAGAZINE RACK

THIS magazine rack permits the magazines to lie flat on three receding shelves which makes it easy to select them. Fig. 1 shows the general assembly. Solid stock is best, although plywood can be used. Fig. 2 details clearly how the legs are bandsawed to shape, following patterns given in Fig. 3. Then they are screwed, from the inside, to a built-up center column, after which the assembly is joined to the upper section before the shelves are fitted in place. A molding around the edges of the base conceals the end grain.
